

ABSTRACT

A signal light fixture for use on a vehicle has a plurality of light-emitting diodes (LEDs)
5 arranged to form an array divided into a first section and a second section, wherein LEDs in
the first section emit red light, and wherein LEDs in the second section emit yellow light. A
portion of the LEDs in the first section are illuminated to perform a rear tail light function,
and all of the LEDs in the first section are illuminated to perform a brake light function. A
portion of the LEDs in the second section are illuminated to perform a running light function,
10 and all of the LEDs in the second section are illuminated to perform a turn signal function.
